Explanation of data

- The average used here is the mean.
- When used here, the term “Across Both Papers” refers to the average score that each student achieved across both papers.
- Percentile rankings show the score achieved by the student closest to the 10th and 25th percentile- essentially, the score needed to be in the top 10% or 25% of students that took this paper, or the top 10% or 25% of students across both papers.
- The mark distribution gives a visual representation of the rough marks achieved by the students taking the exam by showing how many students got each mark.
- The ranking shows the exact marks achieved by the students taking the exams, letting you see exactly how your child has done relative to other students.
